Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

- (Currently Amended) A coated mold insert, comprising:
 a mold insert;
- an electroless nickel layer formed over at least one surface of the mold insert;
- a layer consisting essentially of chromium nitride formed over the electroless nickel layer.
- 2. (Original) The coated mold insert of claim 1, wherein the mold insert is a removable mold insert.
- 3. (Original) The coated mold insert of claim 1, wherein the electroless nickel layer is formed on the mold insert.
- 4. (Original) The coated mold insert of claim 1, wherein the chromium nitride layer is formed on the electroless nickel layer.
- 5. (Original) The coated mold insert of claim 1, wherein the electroless nickel layer is formed on the mold insert, and the chromium nitride layer is formed on the electroless nickel layer.
- 6. (Original) The coated mold insert of claim 1, wherein the electroless nickel layer has a thickness of at least about 5 microns.
- 7. (Original) The coated mold insert of claim 6, wherein the electroless nickel layer has a thickness of at least about 15 microns.
- 8. (Original) The coated mold insert of claim 7, wherein the electroless nickel layer has a thickness of at least about 25 microns.

- 9. (Original) The coated mold insert of claim 8, wherein the electroless nickel layer has a thickness of about 35 microns.
- 10. (Original) The coated mold insert of claim 1, wherein the electroless nickel layer has a thickness of at most about 75 microns.
- 11. (Original) The coated mold insert of claim 10, wherein the electroless nickel layer has a thickness of at most about 50 microns.
- 12. (Original) The coated mold insert of claim 1, wherein the chromium nitride layer has a thickness of at least about .50 micron.
- 13. (Original) The coated mold insert of claim 12, wherein the chromium nitride layer has a thickness of at least about .75 micron.
- 14. (Original) The coated mold insert of claim 13, wherein the chromium nitride layer has a thickness of at least about 1 micron.
- 15. (Original) The coated mold insert of claim 1, wherein the mold insert is insertable into a mold used to form a magnetic member from mold material.
- 16. (Original) The coated mold insert of claim 1, wherein the mold insert comprises:
 - a first mold insert portion having a first surface; and
- a second mold insert portion having a first surface that faces the first surface of the first mold insert portion;

wherein the electroless nickel layer is formed on or over the first surfaces of the first and second mold insert portions.

17. (Original) A mold body, comprising:a first mold portion having a surface;

a second mold portion disposed adjacent the first mold portion and having a surface opposite the surface of the first mold portion;

an opening extending through the mold body and defined by a portion of the surface of the first mold portion and a portion of the second mold portion; and the coated mold insert of claim 1.

- 18. (Original) The mold body of claim 17, wherein the mold further comprises a mold support having a first mold support portion that supports the first mold portion and a second mold support portion that supports the second mold portion.
- 19. (Original) The coated mold insert of claim 1, wherein the mold insert is a Be-Cu mold insert.
